

The Water Cycle- an explanation

Create your own version of this diagram to explain the water cycle. As always, you can use the computer to help you if you like. Don't forget to watch the video explaining the water cycle on the school website and to visit the BBC Bitesize page too as this will help you to understand the water cycle even better. Then below the diagram explain each of the key phases of the water cycle in your own words. You should write at least 2 sentences for each phase of the water cycle. Then, if you have time you could look at the WAU topic grid where one of the activities challenges you to create a comic strip all about the water cycle with a rain drop as the main character.
