

Answers

1. Which of the following is not a stage in the water cycle?

- ☐ evaporation
- ☐ precipitation
- ☒ **sublimation**
- ☐ condensation

2. In which stage of the water cycle does rain occur?

- ☐ accumulation
- ☐ evaporation
- ☐ condensation
- ☒ **precipitation**

3. What is the name for water in gas form?

- ☒ **water vapor**
- ☐ ice
- ☐ plasma
- ☐ liquid

4. What are the three different forms of water?

- ☒ **liquid, gas, solid**
- ☐ steam, water vapor, ice
- ☐ ice, snow, sleet
- ☐ ain, liquid, hail

5. What happens during condensation?

Answers will vary. A possible answer is: During condensation, water vapor in the air cools. As it cools it turns into a liquid.

6. Why is accumulation important for humans?

Answers will vary. Accumulation is important for humans because the different areas of the Earth we inhabit may not always have water falling in the form of precipitation for us to drink. So stored water is necessary.
