

Key Learning: To use a range of mental strategies to add and subtract

Olympic merchandise sales

Merchandise	Amount sold: Week 1	Amount sold: Week 2
T-shirt	235 000	257 000
Flag	314 000	298 000
Key chain	510 000	450 000
Water bottle	98 000	132 000

- 1) How many t-shirts were sold in total for both weeks?
- 2) What is the difference between the number of key chains sold and the number of water bottles sold in week 1?
- 3) How many flags were sold altogether?
- 4) How many more water bottles were sold in the second week than the first week?
- 5) What is the difference between the total number of key chains sold and the total number of water bottles sold?
- 6) What addition and subtraction problems can you generate and solve?

Which question did you find easiest to answer mentally? Explain why you think this?
