

Metre Madness

This week we have a practical challenge for you. We want you to design a 'metre tester'. This tester must be exactly 100cm long, exactly 1 metre. You can design it out of anything you have around the house and decorate it if you like. We also have a printable one available online. Then we want you to go around your house and find 10 objects that are longer than one metre and 10 objects that are shorter than one metre. Once you have all these can you put them in a list. If you're up for a challenge, can you put them in order from smallest to biggest?

Don't forget to send your teacher your results.
