

Spaceman Sid

Problem - Spaceman Sid landed on planet Crit. He met some aliens. Some of the aliens had 1 eye and some of the aliens had 2 eyes. Altogether he counted 9 eyes. How many of each type of alien could he have seen? Can you find all the possibilities?

$2+2+2+2+1$	= 9 eyes
	= 9 eyes
	= 9 eyes
	= 9 eyes
	= 9 eyes
	= 9 eyes
	= 9 eyes
