Rainfore t Animals

Toucan

What they eat

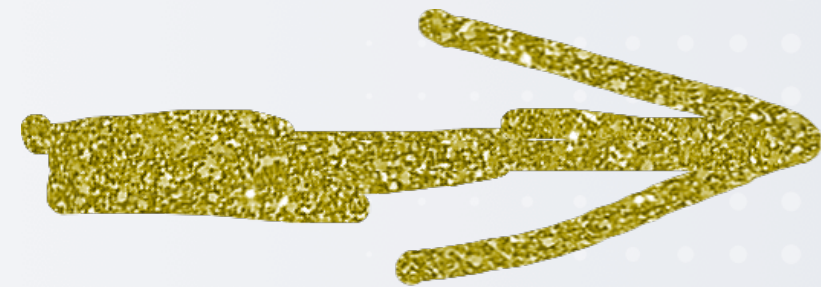

They eat fruit and berries.

Size size from about 7 inches to a little over two feet.

Location

Toucans are found in South and Central America in the canopy layer of the rainforest.

If you want to find out more about toucans then watch this video

Scarlet macaw

Location

In these countries, they live in tropical and sub-tropical rainforests. They will build their nest high in the rainforest canopy, in the holes of hollow trees

What they eat

They eat fruit nuts and berries

Size

These birds grow anywhere from 2.5 feet to 3 feet

Reproduction

Like most parrots, these birds lay 2 to 4 eggs at a time in the holes of trees. The incubation time for these eggs to hatch is approximately 25 - 35 days.

Sloths

Location

Some sloths stay in the same tree for years

Reproduction

Baby sloths are born upside down and they cling onto their mother until they can go upside down by itself

What they eat

They feed on fruit, leaves, buds, and young

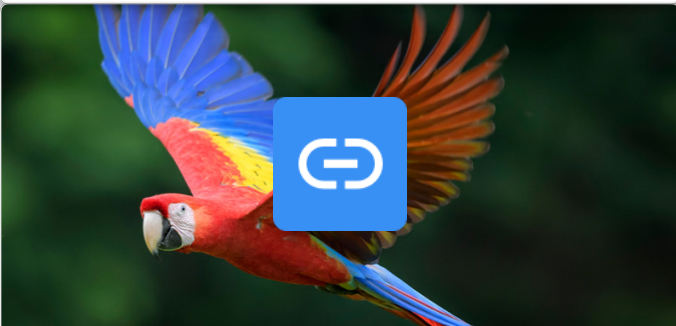

Size

Sloths are as small as a dog and sloths also they have a flat head
